Re: QCX LLC 40.6(a) Fee Schedule Submission

I. Introduction

QCX LLC ("Polymarket US" or the "Exchange"), a designated contract market ("DCM") registered with the Commodity Futures Trading Commission ("Commission" or "CFTC"), hereby submits this notice pursuant to Commission Regulation 40.6(a) to self-certify revisions to its fee schedule, as set forth in Exhibit K.

The proposed revisions replace the Exchange's existing tiered taker fee rebate with a revised tiered taker fee rebate based on each Participant's notional taker volume during the prior calendar month, and replace the Exchange's at-trade maker rebate with a zero maker fee and a tiered at-trade maker rebate. Participants will receive a rebate of their total taker fees according to the following tiers: a 10% rebate for notional taker volume of $500,000 up to $25,000,000; a 25% rebate for $25,000,000 up to $100,000,000; and a 90% rebate for $100,000,000 and above.

The applicable rebate percentage is applied to the taker fees the Participant actually paid. Taker rebates are paid weekly.

In addition, the maker fee is set to zero for all Participants, the existing at-trade maker rebate is discontinued, and Participants will instead receive an at-trade maker rebate, calculated as a percentage of the gross taker fees generated on the Participant's maker-side transactions, according to the following tiers based on prior-calendar-month notional maker volume: a 10% rebate for $2,000,000 up to $15,000,000; a 15% rebate for $15,000,000 up to $50,000,000; and a 20% rebate for $50,000,000 and above. A Participant that does not qualify for a maker rebate tier pays no maker fee and receives no maker rebate.

In addition, a Participant may qualify for an accelerated tier placement (the "Accelerated Tier Placement") by providing verifiable proof of its trailing 30-day notional taker volume (or, for the maker tiers, notional maker volume) on another prediction market, in which case the Participant will be assigned to the rebate tier corresponding to that volume. A Participant may use the Accelerated Tier Placement only once. Because tier placement is otherwise determined by the prior calendar month's volume, rebate levels are deterministic and known at the start of each month.

These revisions are adopted pursuant to and in accordance with the Exchange's fee schedule and applicable provisions of the Polymarket US Rulebook (the "Rulebook"). Polymarket US operates a centralized order book offering fully collateralized contracts. As a registered DCM, the Exchange is committed to maintaining a transparent, reasonable, and non-discriminatory fee structure consistent with the Commodity Exchange Act, as amended (the "CEA") and Commission regulations. The Exchange retains the discretion to update the volume thresholds and rebate amounts as the Exchange evolves, subject to applicable self-certification requirements.

The revised fee schedule is attached as Exhibit K and will become effective ten (10) business days following certification to the Commission, as permitted under Commission Regulation 40.6. Capitalized terms used but not defined herein shall have the meanings assigned in the Rulebook.

II. Concise Explanation and Analysis of the Revisions, and Their Compliance with Applicable Provisions of the CEA, Including the Core Principles and Commission Regulations

The proposed revisions introduce a revised tiered, volume-based taker fee rebate and a tiered at-trade maker rebate, each designed to incentivize liquidity provision on the Exchange. Takers receive a rebate of their total taker fees scaled to prior-calendar-month notional taker volume: a 10% rebate for notional taker volume of $500,000 up to $25,000,000; a 25% rebate for $25,000,000 up to $100,000,000; and a 90% rebate for $100,000,000 and above. Makers pay no fee, and receive an at-trade rebate, applied at the time of trade at a rate scaled to prior-calendar-month notional maker volume of 10%, 15%, or 20% across the \$2,000,000–\$15,000,000, \$15,000,000–\$50,000,000, and \$50,000,000-and-above tiers, respectively. A Participant may also be placed in the corresponding tier through the Accelerated Tier Placement, used at most once, by furnishing verifiable proof of its trailing 30-day volume on another prediction market. This structure rewards high-volume participation while maintaining a transparent and deterministic rebate mechanism keyed to objective, uniformly applied volume thresholds.

The Exchange believes the revised structure promotes liquidity, enhances price discovery, and maintains transparency through a uniform and deterministic formula. The Exchange has reviewed the proposed changes for consistency with the CEA and Commission regulations, including the Core Principles for designated contract markets. In particular, the Exchange has evaluated the revisions under Core Principle 2 (Compliance with Rules) and the impartial access requirements of Commission Regulation 38.151(b) and has determined that the fees are reasonable, equitably allocated, and not applied in a discriminatory manner. The tiered rebate is available to all Participants on the same objective terms.

The revised structure does not restrict market access, does not impose disparate costs on similarly situated participants, and remains consistent with fair and competitive market practices.

III. Certification

The Exchange hereby certifies to the CFTC, pursuant to the procedures set forth in Commission Regulation 40.6, that the attached fee schedule submission complies with the CEA and the regulations promulgated thereunder. Further, the Exchange is not aware of any substantive opposing views expressed regarding the proposed fee change. QCX LLC additionally certifies that, simultaneously with this filing, a copy of this submission was published on the Exchange’s website. Please contact me using the information below if you have any questions regarding this notice.

Sincerely,

/s/ Megan McGrath

DCM EXHIBIT K
FEE SCHEDULE

K-1: A complete list of all dues, fees and other charges imposed, or to be imposed, by or on behalf of Applicant for its designated contract market services that are provided on an exclusive basis and identify the service or services provided for each such due, fee, or other charge.

Response:

Fees are calculated using the following formula:

Fee = $\Theta \times C \text{ x } p \times (1 - p)$

- C is the number of contracts
- P is the trade price (\$0.01 to \$0.99)
- Θ (theta) is the fee coefficient
    - Taker Fee: $\Theta = +0.06$
    - Maker Fee: $\Theta = 0$ (no maker fee)

Maker rebate: The maker fee is zero for all Participants. Participants receive an at-trade maker rebate, calculated as a percentage of the gross taker fees generated on the Participant's maker-side transactions, based on their notional maker volume during the prior calendar month, according to the following tiers:

- **\$2,000,000 up to \$15,000,000:** 10% rebate
- **\$15,000,000 up to \$50,000,000:** 15% rebate
- **\$50,000,000 and above:** 20% rebate

A Participant that does not qualify for a maker rebate tier pays no maker fee and receives no maker rebate.

Taker rebate: Participants receive a rebate of their total taker fees based on their notional taker volume during the prior calendar month, according to the following tiers:

- **\$500,000 up to \$25,000,000:** 10% rebate
- **\$25,000,000 up to \$100,0**00,000: 25% rebate
- \$100,000,00**0 and above:** 90% rebate

Taker rebates are paid weekly.
Accelerated Tier Placement: A Participant may provide verifiable proof of its trailing 30-day notional taker volume (or notional maker volume, for the maker tiers) on another prediction market and be assigned to the rebate tier corresponding to that volume. The Accelerated Tier Placement may be used only once per Participant.

Notional volume is measured on a calendar-month basis, and a Participant's tier for a given month is determined by its volume in the immediately preceding calendar month, effective as of 12:00 a.m. on the first day of each calendar month. The Exchange reserves the discretion to update the volume requirements and rebate amounts as the Exchange evolves, subject to applicable self-certification requirements.

K-2: A description of the basis and methods used in determining the level and structure of the dues, fees and other charges listed in paragraph (a) of this item.

Response:

This maker-taker fee structure is similar to structures used by other DCMs for fully collateralized contracts and reflects the Exchange's objective of incentivizing liquidity provision while supporting the costs associated with operating, maintaining, and enhancing a centralized, continuously available trading and risk management system.

The tiered taker and maker rebates are keyed to objective, uniformly applied notional-volume thresholds measured over the prior calendar month, which makes each Participant's rebate level deterministic and known at the start of the month. The Exchange periodically reviews its fee levels and tier thresholds to ensure they remain reasonable, non-discriminatory, and aligned with market conditions, and retains the discretion to update the volume requirements and rebate amounts as the Exchange evolves.

K-3: If the Applicant differentiates, or proposes to differentiate, among its customers, or classes of customers in the amount of any dues, fees, or other charges imposed for the same or similar exclusive services, so state and indicate the amount of each

differential. In addition, identify and describe any differences in the cost of providing such services, and any other factors, that account for such differentiations.
Response: The Exchange differentiates among Participants solely based on objective, uniformly applied notional-volume tiers measured over the prior calendar month. Participants are eligible for taker fee rebates of 10%, 25%, or 90% depending on whether their prior-month notional taker volume falls within the \$500,000–\$25,000,000, \$25,000,000–\$100,000,000, or \$100,000,000-and-above tiers, respectively; the rebate percentage is applied to taker fees actually paid. Makers pay no fee and are eligible for at-trade maker rebates of 10%, 15%, or 20% for prior-month notional maker volume of \$2,000,000–\$15,000,000, \$15,000,000–\$50,000,000, and \$50,000,000 and above, respectively. A Participant may alternatively be placed in the corresponding tier, once, by providing verifiable proof of its trailing 30-day volume on another prediction market (the "Accelerated Tier Placement"). The differential is based on objective volume criteria, not on Participant identity, customer type, membership status, or discretion. There are no material differences in the cost of providing execution services to Participants across tiers; rather, the tiered rebates are intended to encourage trading activity, enhance liquidity and price discovery, and spread fixed market operating and regulatory costs over greater volume. The program is publicly disclosed, applied impartially to all similarly situated Participants, and will be administered and surveilled consistent with the Applicant's rules and applicable recordkeeping obligations.
